**REQUEST UNDER PCT RULE 91.1(b)**  
**FOR RECTIFICATION OF OBVIOUS ERRORS**

Transmitted herewith for filing is a Request Under PCT Rule 91.1(b) for Rectification of Obvious Errors with substitute sheets.

If the enclosed papers are considered incomplete, the Authorized Officer is respectfully requested to contact the undersigned collect at (617) 720-3500, Boston, Massachusetts.

Respectfully submitted,

  
John R. Van Amsterdam

**REQUEST UNDER PCT RULE 91.1(b)**  
**FOR RECTIFICATION OF OBVIOUS ERRORS**

Applicant would like to bring to the Authorized Officer's attention that changes have been made to the above-identified international application.

**In the Specification**

Page 11, line 17, after "body" insert reference numeral --step 305-- for clarification;

Replacement sheet page 11 is enclosed. Applicant respectfully requests that this replacement sheet be accepted and replace originally filed page 11 to reflect the changes. No new matter has been added.

**REMARKS**

The Authorized Officer is invited to contact the undersigned by collect telephone call should he/she have any questions concerning this Request.

Respectfully submitted,

John R. Van Amsterdam

coils, transmission line array coils, various other resonant coils, etc. A resonant coil may comprise any number and arrangement of reactive components (e.g., capacitors and inductors) by which resonant electromagnetic fields may be generated.

For simplicity and clarity, various aspects of the present invention will be illustrated in connection with the generally planar coil illustrated in FIG. 2. For example, FIGS. 6 and 9 illustrate coil arrays comprising a plurality of coils schematically depicted as the general conductive loop connected by lumped capacitors. However, this depiction is meant to indicate the presence of a resonant coil and not the specific type or arrangement (e.g., planar, birdcage, etc.). As such, any type of resonant coil could be used. The invention is not limited to the coils specifically illustrated herein and contemplates use with any of the coils mentioned above or any other coils capable of generating resonant EM fields.

FIG. 3 illustrates one embodiment according to the present invention of a method for determining dielectric properties of a body acting as a load on an array of RF coils. The coil array may comprise a plurality of coils each having a resonant frequency. That is, an unloaded  
15 coil may be configured to resonate at a generally known nominal frequency. Each coil in the array may be designed to have a same or different nominal resonant frequency.

In step 310, a body (step 305) to be imaged may be positioned proximate to the plurality of coils in the array. In particular, the body is placed in a spatial relationship with the array such that the body acts as a load, causing some measurable loading effect on the array.

20 The body is typically positioned in a generally known relationship with the array. The body may comprise one or more regions with unknown dielectric properties. For example, the body may be a patient having regions of homogeneous and inhomogeneous regions of conductivity and/or permittivity, or the body may be baggage such as airline luggage to be analyzed for items having certain conductivity and/or permittivity characteristics.

25 In step 320, a change in one or more resonant properties the coil array may be detected. For example, one or more measurements of properties of the coil array may be obtained. As described above, the loading effect resulting from placing the load proximate to the one or more coils will affect various properties of the coils. For example, various impedance characteristics of the coil array may be measured by operating one or more of the coils and  
30 measuring the impedance characteristics of one or more other coils in the array.

In step 330, the change in the one or more resonant properties of at least one of the coils may be used to determine dielectric properties of the body. For example, one or more

### Bestätigung über den Eingang nachgereichter Unterlagen für Patentan- meldungen/Patente beim Europäischen Patentamt

Datum und Ort des Eingangs sind aus  
der Perforation dieser Eingangsbestäti-  
gung ersichtlich  
(M + Datum = Einreichungsort München;  
Datum ohne Zusatz = Einreichungsort  
Den Haag; Datum + B = Einreichungsort  
Berlin)

### Acknowledgement of receipt for subsequently filed items relating to patent applications/patents at the European Patent Office

Date and place of receipt are shown by  
the perforation appearing on this receipt  
(M + date = Munich as place of receipt;  
date alone = The Hague as place of  
receipt; date + B = Berlin as place of  
receipt)

### Accusé de réception à l'Office européen des bre- vets de pièces produites postérieurement au dépôt d'une demande de brevet/ à la délivrance d'un brevet européen

La date et le lieu de réception sont indi-  
qués par la perforation du présent accusé  
de réception  
(M + date = pièces reçues à Munich;  
date seule = pièces reçues à La Haye;  
date + B = pièces reçues à Berlin)
